

## **Tower for 2060**

Life cycle tower for a sustainable society in Bregenz  
with timber construction and solar façade

Master Thesis 2011

Institute of Architecture and Planning  
Master of Science in Architecture  
Sustainable Design

Professor: Dietrich Schwarz  
Assistent: Robert Mair  
Studentin: Katharina Berchtold

UNIVERSITÄT  
LIECHTENSTEIN

## Table of content

	<b>Abstract</b>	
<b>1.</b>	<b>Introduction</b>	<b>11</b>
<b>2.</b>	<b>Research</b>	<b>15</b>
2.1.	Definition sustainability	15
2.1.1.	Definition sustainable design	15
2.2.	Solar architecture	16
2.2.1.	Definition of solar architecture	16
2.2.2.	History of solar architecture	17
2.2.3.	Experimental series of solar gains	21
2.3.	The ecological footprint	30
2.3.1.	The global footprint	30
2.3.2.	Footprint equivalent to Vorarlberg	32
2.3.3.	Footprint connected to life quality	37
2.3.4.	Result of the footprint analyse	42
2.4.	Learning from New York City	44
2.4.1.	The culture of congestions	44
2.4.2.	Analyse of skyscraper	40
<b>3.</b>	<b>Project Tower for 2060</b>	<b>54</b>
3.1.	Description of the location Bregenz	54
3.1.1.	Description of the building site in Bregenz	56
3.1.2.	Analyse of usage of the tower in Bregenz	58
3.2.	Analyse of high and size of the tower	59
3.2.1.	Sun study of the tower	62
3.2.2.	Tower and impacts to the City	64
4.4.3.	Tower and influences to the inhabitants	65
3.3.	Analyse of reducing space	66
3.4.	Project tower for 2060	68
3.4.1.	Project description	69
3.4.2.	Development of the ground floor	70
3.5.	Final plans of the tower	72
3.5.1.	Floor plans of the tower	72
3.5.2.	Section and elevation of the tower	80
3.5.3.	Fagade section	84
3.6.	Description of solar fagade	86
3.6.1.	Thermal analyses of the glazing	88
3.6.2.	Heating demand of the tower	90
3.6.3.	Analyse of construction material	92
3.7.	Conclusion	96
