Contents

Preface	ix
Data, Solutions, and Corrections	xviii
1 Regression Models	1
1.1 Introduction	1
1.2 Distributions, Densities, and Moments	3
1.3 The Specification of Regression Models	15
1.4 Matrix Algebra	22
1.5 Method-of-Moments Estimation	30
1.6 Notes on the Exercises	37
1.7 Exercises	38
2 The Geometry of Linear Regression	42
2.1 Introduction	42
2.2 The Geometry of Vector Spaces	43
2.3 The Geometry of OLS Estimation	54
2.4 The Frisch-Waugh-Lovell Theorem	62
2.5 Applications of the FWL Theorem	69
2.6 Influential Observations and Leverage	76
2.7 Final Remarks	81
2.8 Exercises	82
3 The Statistical Properties of Ordinary Least Squares	86
3.1 Introduction	86
3.2 Are OLS Parameter Estimators Unbiased?	88
3.3 Are OLS Parameter Estimators Consistent?	92
3.4 The Covariance Matrix of the OLS Parameter Estimates	97
3.5 Efficiency of the OLS Estimator	104
3.6 Residuals and Error Terms	107
3.7 Misspecification of Linear Regression Models	111
3.8 Measures of Goodness of Fit	115
3.9 Final Remarks	118
3.10 Exercises	118
4 Hypothesis Testing in Linear Regression Models	122
4.1 Introduction	122
4.2 Basic Ideas	122
4.3 Some Common Distributions	129
4.4 Exact Tests in the Classical Normal Linear Model	138
4.5 Large-Sample Tests in Linear Regression Models	146

4.6	Simulation-Based Tests	155
4.7	The Power of Hypothesis Tests	166
4.8	Final Remarks	172
4.9	Exercises	172
5	Confidence Intervals	177
5.1	Introduction	177
5.2	Exact and Asymptotic Confidence Intervals	178
5.3	Bootstrap Confidence Intervals	185
5.4	Confidence Regions	189
5.5	Heteroskedasticity-Consistent Covariance Matrices	196
5.6	The Delta Method	202
5.7	Final Remarks	209
5.8	Exercises	209
6	Nonlinear Regression	213
6.1	Introduction	213
6.2	Method-of-Moments Estimators for Nonlinear Models	215
6.3	Nonlinear Least Squares	224
6.4	Computing NLS Estimates	228
6.5	The Gauss-Newton Regression	235
6.6	One-Step Estimation	240
6.7	Hypothesis Testing	243
6.8	Heteroskedasticity-Robust Tests	250
6.9	Final Remarks	253
6.10	Exercises	253
7	Generalized Least Squares and Related Topics	257
7.1	Introduction	257
7.2	The GLS Estimator	258
7.3	Computing GLS Estimates	260
7.4	Feasible Generalized Least Squares	264
7.5	Heteroskedasticity	266
7.6	Autoregressive and Moving-Average Processes	270
7.7	Testing for Serial Correlation	275
7.8	Estimating Models with Autoregressive Errors	285
7.9	Specification Testing and Serial Correlation	292
7.10	Models for Panel Data	298
7.11	Final Remarks	305
7.12	Exercises	306
8	Instrumental Variables Estimation	311
8.1	Introduction	311
8.2	Correlation Between Error Terms and Regressors	312
8.3	Instrumental Variables Estimation	315
8.4	Finite-Sample Properties of IV Estimators	324

8.5	Hypothesis Testing	330
8.6	Testing Overidentifying Restrictions	336
8.7	Durbin-Wu-Hausman Tests	338
8.8	Bootstrap Tests	342
8.9	IV Estimation of Nonlinear Models	345
8.10	Final Remarks	347
8.11	Exercises	347
9	The Generalized Method of Moments	352
9.1	Introduction	352
9.2	GMM Estimators for Linear Regression Models	353
9.3	HAC Covariance Matrix Estimation	362
9.4	Tests Based on the GMM Criterion Function	365
9.5	GMM Estimators for Nonlinear Models	369
9.6	The Method of Simulated Moments	383
9.7	Final Remarks	393
9.8	Exercises	394
10	The Method of Maximum Likelihood	399
10.1	Introduction	399
10.2	Basic Concepts of Maximum Likelihood Estimation	399
10.3	Asymptotic Properties of ML Estimators	408
10.4	The Covariance Matrix of the ML Estimator	415
10.5	Hypothesis Testing	420
10.6	The Asymptotic Theory of the Three Classical Tests	429
10.7	ML Estimation of Models with Autoregressive Errors	435
10.8	Transformations of the Dependent Variable	437
10.9	Final Remarks	443
10.10	Exercises	444
11	Discrete and Limited Dependent Variables	451
11.1	Introduction	451
11.2	Binary Response Models: Estimation	452
11.3	Binary Response Models: Inference	460
11.4	Models for More Than Two Discrete Responses	466
11.5	Models for Count Data	475
11.6	Models for Censored and Truncated Data	481
11.7	Sample Selectivity	486
11.8	Duration Models	489
11.9	Final Remarks	495
11.10	Exercises	495
12	Multivariate Models	501
12.1	Introduction	501
12.2	Seemingly Unrelated Linear Regressions	501
12.3	Systems of Nonlinear Regressions	518

12.4	Linear Simultaneous Equations Models	522
12.5	Maximum Likelihood Estimation	532
12.6	Nonlinear Simultaneous Equations Models	540
12.7	Final Remarks	543
12.8	Appendix: Detailed Results on FIML and LIML	544
12.9	Exercises	550
13	Methods for Stationary Time-Series Data	556
13.1	Introduction	556
13.2	Autoregressive and Moving-Average Processes	557
13.3	Estimating AR, MA, and ARMA Models	565
13.4	Single-Equation Dynamic Models	575
13.5	Seasonally	579
13.6	Autoregressive Conditional Heteroskedasticity	587
13.7	Vector Autoregressions	595
13.8	Final Remarks	599
13.9	Exercises	599
14	Unit Roots and Cointegration	605
14.1	Introduction	605
14.2	Random Walks and Unit Roots	605
14.3	Unit Root Tests	613
14.4	Serial Correlation and Unit Root Tests	620
14.5	Cointegration	624
14.6	Testing for Cointegration	636
14.7	Final Remarks	644
14.8	Exercises	644
15	Testing the Specification of Econometric Models	650
L5.1	Introduction	650
L5.2	Specification Tests Based on Artificial Regressions	651
15.3	Nonnested Hypothesis Tests	665
15.4	Model Selection Based on Information Criteria	675
15.5	Nonparametric Estimation	677
15.6	Final Remarks	692
15.7	Appendix: Test Regressors in Artificial Regressions	692
15.8	Exercises	695
	References	702
	Author Index	722
	Subject Index	726
